

Product Brief

Change Healthcare Lab Integration

ClinicTracker Collaborates with Change Healthcare

Intuitive lab order capabilities within ClinicTracker.

Integrate laboratory and ancillary service providers into ClinicTracker.

Lab Integration: Overview

ClinicTracker has collaborated with Change Healthcare to add an intuitive lab order capability within our EHR system. This new feature enables agencies to create and send orders, then automatically receive results from the lab, monitoring the status along the way. Regardless of which laboratory or ancillary service provider your agency needs to order from, you will have the ability to track those orders by status and receive all the commensurate results in a way that seamlessly integrates with ClinicTracker.

Change Healthcare's Clinical Network already integrates with over 600 labs across the country. If your lab is in-network, integrating orders and results into ClinicTracker is a very simple process. For out-of-network labs, Change Healthcare will work to build connectivity and incorporate them into their growing network.

Change Healthcare electronically delivers more than 50 million results and clinical reports per year.

Change Healthcare
integrates with over 600
labs across the country.

Lab Integration: Features

- Automated results routing into ClinicTracker
- Easy to use ordering solution
- Integrated rules ensure the order is sent correctly the first time
- Online directory of services available from participating service providers
- AutoPrint automated printing available

Lab Integration: Benefits

Improve Efficiency. Laboratory or other ancillary service providers have their clinical and business rules integrated into your ordering process, making orders immediately ready for processing and billing upon receipt.

Reduce Call Backs. Getting the order right the first time eliminates phone calls to your office to gather needed clinical or financial information often missing in a paper-based process.

Streamlined Workflow. The Clinical Network provides the ability to place orders electronically and delivers results within the system and workflow you are already accustomed to. That increases your office staff's efficiency and leverages the patient-centric record you have already invested in.

Drive Outcomes. Regardless of which laboratory or ancillary service provider you need to order from, you'll have the ability to track those orders by status and receive all the commensurate results in a way that seamlessly integrates with ClinicTracker. Change Healthcare Clinical Network can deliver all the results cohesively in your existing ClinicTracker EHR workflow to allow you to manage patient outcomes based on data from all your diagnostic providers.
