Let ClinicTracker Organize Your Payroll

With our new Payroll Management feature, we continue our longstanding tradition of identifying every possible opportunity to establish our software as where you go to get anything and everything done. The more clinic functions are integrated into one solution, the less time you waste re-inputting data, dealing with multiple software packages, and worrying about errors.

Because ClinicTracker already knows what's been billed and who provided the service, you just need to tell it how each of each of your providers are reimbursed. You configure these rules at the outset based on the:

- Percentage of Billed Amount
- Percentage of Collected Amount
- Fixed Amount Per Service
- Fixed Amount Per Unit.

Once you configure the system, you're set to manage your payroll expenses. Either enter a payroll period of your choosing or select from one that ClinicTracker generates. You also can mark payroll items as Open or Paid and notate the pay period. It all takes just a few seconds.

You can even print a Payroll Report that displays reimbursements segregated by billing locations.

ClinicTracker eases the heavy burden of Payroll Management with our automated management of your payroll expenses.

Payroll Rules: Barbara Anthonson, M.D.

Anthonson, Barbara
