Log in to Fund Accounting directly from BillingTracker using your Abila username and password. Transferring data between BillingTracker and the Abila General Ledger is seamless.

Abila Fund Accounting integration for nonprofit agencies

ClinicTracker Connect records all of your client encounters, while BillingTracker converts them into claims and records payments. But what if you want to pursue a more sophisticated financial analysis? Abila (formerly Sage) MIP Fund Accounting is the award-winning tool for managing payables, receivables, grants, complex allocations, projecting budgets, tracking funds, and forecasting cash flow. A tight integration with Abila Fund Accounting makes it easy to convert your billing data into valuable accounting information.

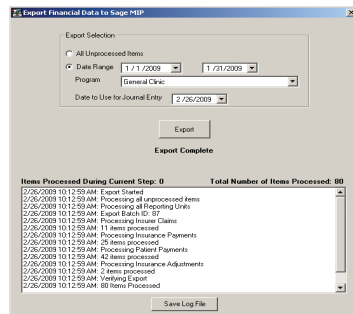

Eliminate data entry errors and save time with direct integration:

- Link BillingTracker insurers to funding sources
- Link ClinicTracker Connect programs to Abila reporting units
- Associate insurers with receivable/revenue accounts

Simple import/export process

- Filter export files by program and date range
- Review export batches directly from a file or using a built-in viewer utility
- Log directly into Abila from BillingTracker and process your import files
- Void and correct export mistakes if necessary

Abila MIP Fund Accounting is the award-winning software that allows you to:

- Cut hours or days off of your reporting cycle
- Create the reports you need within the system, instead of manipulating data with external spreadsheets or fighting with complex, external report-writing tools
- Customize the chart of accounts for quick data access and efficient tracking/reporting
- Automate transaction entry, boost productivity, and reduce errors thanks to a variety of tools, including memorized rules and entry defaults
- Use the dynamic drill-down analyzer to review individual transactions that make up balances on reports
- Make it easy for auditors to verify the accuracy of financial statements by maintaining a clear audit trail

BillingTracker's features:

- Create a claim from a Clinical Appointment record with the click of a button
- Send claims electronically or on paper to Medicare, Medicaid, and commercial payers
- Record client or insurer payments, handle adjustments, and manage credit balances
- Manage your receivables with built-in and customizable reports
- Automated insurance eligibility verification

As an Abila Development Partner, JAG Products is able to offer a truly integrated solution for all your claims, billing, and accounting needs.
