

To help improve efficiency, reduce healthcare costs and increase patient safety, practices should adhere to the following best practices when using ePrescribing.

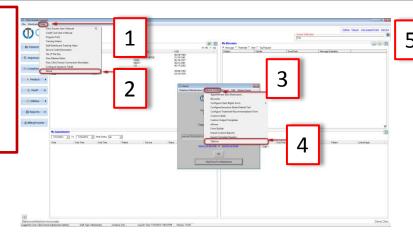

Ensure the patient demographics are filled out accurately. At a minimum:

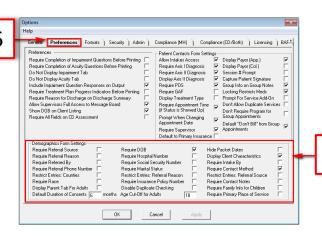

- Patient's legal first name
- Patient's legal last name
- Address
- Zip Code
- Phone Number
- Date of Birth
- Gender
- Go to: Patients
- Click Demographics
- Select the Demographics tab
- 4. Enter the necessary information

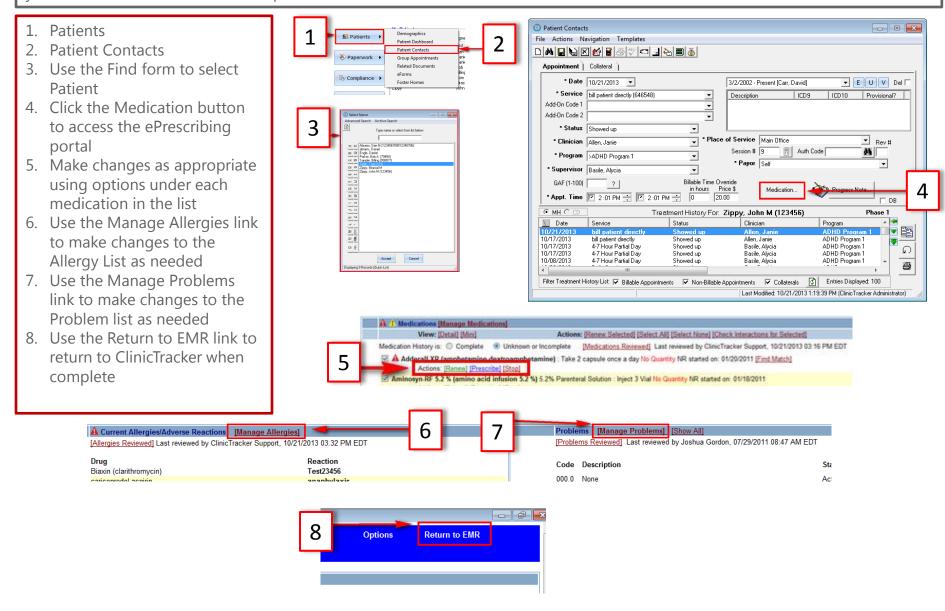

Note: Administrators can adjust required field settings using the Options form to ensure compliance.

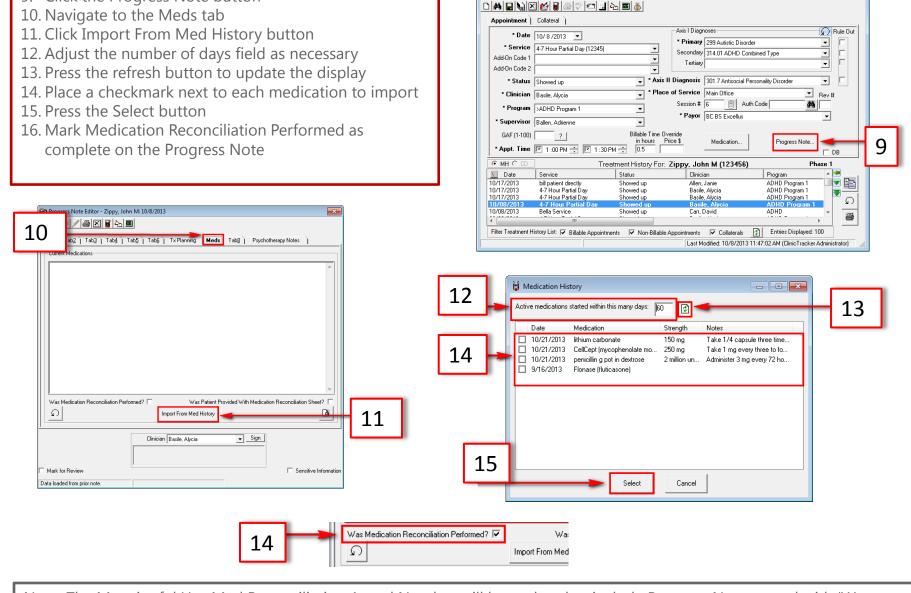

- Help
- About
- Admin Config
- **Options**
- Preferences tab
- **Demographics** Form Settings

Make sure the medication list, allergy list, and problem list are accurate and review it with the patient. You can document when you have reviewed the list with the patient.

(1) Patient Contacts

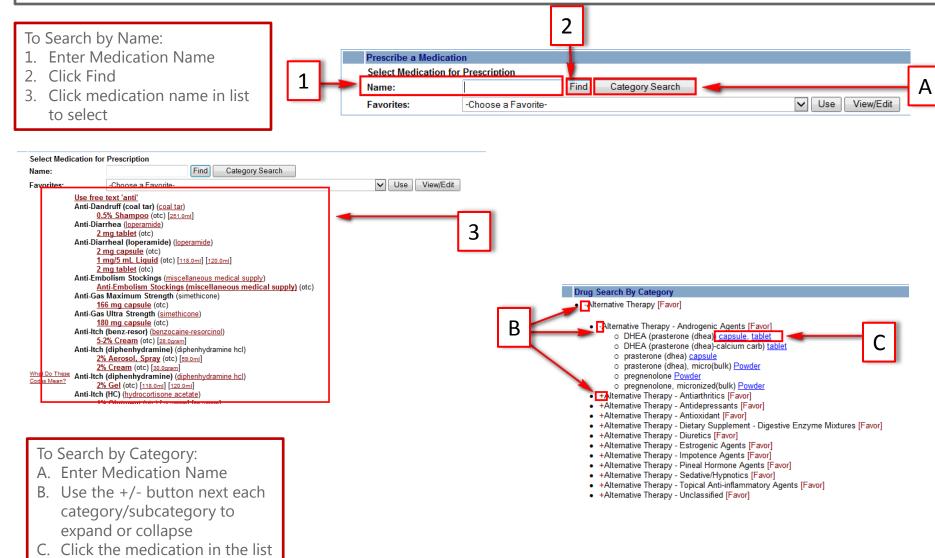

File Actions Navigation Templates

9. Click the Progress Note button

- - X

Note: The Meaningful Use Med Reconciliation Actual Number will be updated to include Progress Notes saved with 'Was Medication Reconciliation Performed' option selected.

When prescribing a new medication, choose the medication either from the drug search or through the therapeutic category search. This will ensure that a 'coded' drug is selected for the purposes of clinical and formulary checking.
