

🔊 ClinicTracker

Clinical Scribe, Powered by AI

FASTER DOCUMENTATION, ENHANCED COMPLIANCE, IMPROVED REIMBURSEMENT, BETTER CARE.

ClinicTracker's Clinical Scribe premiere documentation technology transforms how clinicians capture, manage, and streamline their documentation. Fully integrated into the ClinicTracker EHR system, this solution automates note-taking, aligns with payer requirements, significantly reduces administrative burden, and allows providers to focus on delivering quality patient care. This is the future of behavioral health.

Live Session Transcription

Using advanced reasoning capabilities, the AI extracts key concepts from live in-person or telehealth conversations to document appropriately in accordance with organizational, payer, and compliance guidelines. No audio is recorded; we use speech-to-text technology that is temporarily held to generate a note or document.

Assessments

Our fine-tuned AI leverages complex neural networks to align your assessments with level-of-care frameworks, including CARF, Joint Commission, and CMS standards. Because Clinical Scribe is embedded within the EHR, it dynamically tailors each assessment to the patient and their treatment goals.

Template Integration

Clinical Scribe has been embedded into your existing templates. You define the criteria required for every field in each template, locking in consistency. This generates rich charts that help you stay audit-ready and make arguments for sustained levels of care.

The Golden Thread

As Clinical Scribe creates new notes and documents, it concurrently reviews client charts, treatment plans, assessments, and previous notes. It ensures continuity and compliance by weaving client goals, planned interventions, and direct quotes from sessions into all documentation.

Anchored In Compliance

Ensure that every document is accurate and adheres to the latest compliance standards. By automatically verifying and correcting documentation, our solution grounds your organization in a solid compliance framework, expediting approvals and optimizing reimbursement. Fewer delays, efficient audits, and streamlined processes.

Intelligent & Chart Aware

Clinical Scribe is chart-aware, meaning it can reference relevant treatment history and clinical context within the EHR to enrich every note and document by supporting compliance and payer requirements.

Post Session Dictation

In addition to live session transcription, you can also dictate a post-session summary using natural language to generate a comprehensive, formatted note based on your instructions. Dictation can also be used to edit and reformat your completed document.

The screenshot shows a web browser window displaying a SOAP Note template for a patient named Zippy, Jean-Luc (Frank) with ID 300000397, dated 08/01/2024. The interface includes a navigation bar with tabs for 'SD', 'MMSL', 'MS2', 'Tx Planning', and 'API'. Below the navigation bar, there is a section for 'Individuals Present' with a list of checkboxes: Patient, Parent/Guardian, Siblings, DSS Caseworker, Service Coordinator, Student/Resident/Fellow, Spouse/Partner/Significant Other, and Other. Below this is a 'Subjective' field with a placeholder '(information and symptoms reported by patient and/or family)'. Underneath is an 'Objective' field with a placeholder '(information derived from clinical contact including changes in mental status, signs, symptoms, lab tests, and/or session details)'. At the bottom, there is a 'Rating Scales' section. A small blue circular icon is visible in the bottom right corner of the form area.
