

Product Brief

ClinicTracker Mobile

Online or Offline Access to ClinicTracker from Anywhere

Offer your traveling workforce all the benefits of ClinicTracker.

About Canvas

Canvas eliminates costly paper forms and surveys and transforms them into do-it-yourself Business Apps for your smartphone, tablet, laptop, PDA, or netbook. Canvas reduces redundant data entry and excess processes, making it easy for businesses and mobile professionals to configure, distribute, and complete forms.

Extending a mobile reach to ClinicTracker users

Because many of our customers work with consumers outside of the office, they need a mobile connection to access client records. We partnered with Canvas to meet the special needs of a mobile workforce. This technology allows you to enter and view ClinicTracker data at any location using your mobile device. ClinicTracker Mobile provides customized templates that capture, track, document, and integrate information with your data – using a smartphone, tablet, laptop, PDA, or netbook. We can also develop new custom templates for you to record any type of service you provide and connect them to your EMR.

Typical uses for mobile access with ClinicTracker

If outreach staff leave the office for a home visit, they can still enter clinical information simply by opening the ClinicTracker application on a mobile device. Using drop-down menus, check boxes, and text fields, they can enter the required information securely and even capture client signatures. When they're done, the information is automatically uploaded back to your system. **No internet or cell phone connection? No problem!** You can still record events while disconnected, and the information will be automatically transmitted once a connection becomes available.

ClinicTracker Mobile is ideal for:

- Home care visits
- Community-based services
- Tracking pick-up/drop-offs for clients who require transportation
- Jail system visits
- Out-of-office interviews
- Client signature capture for proof of service delivery
- Recording service details
- Writing Progress Notes
- Patient information look-up
- Viewing a client's schedule
- Providing services in areas where you don't want to bring a computer

Curious how to put mobile to work for you?

The possibilities are limitless:

- Record services wherever they take place
- Enter data on small devices via drop-down menus and check boxes
- Capture client signatures
- Work in offline mode when coverage is unavailable
- Utilize HIPAA-compliant security procedures
- View patient appointment history, medication history, and demographic information instantly through full integration with ClinicTracker EMR

Currently Supported Platforms

Android

Windows
(XP and newer)

iPhone
iPad

Blackberry

Have complete confidence that all of your services are captured and recorded wherever they are provided.
