ClinicTracker Meaningful Use Edition – Stage 2

Take Advantage of Government Funding With Our Certified Software

The Drummond Group has awarded ClinicTracker ONC-ACB certification as a Modular Ambulatory EHR for 2014.

[Get Ready for Meaningful Use – Stage 2](#)

We're excited and proud to announce that ClinicTracker has achieved Stage 2 Meaningful Use Certification according to requirements set forth by the Secretary of the U.S. Department of Health and Human Services. ClinicTracker Connect MU Edition is one of the few dedicated Behavioral Healthcare EHR's that has been ONC-ACB certified and can support your MU attestation.

Because the Stage 2 criteria are far more more rigorous than they were for Stage 1, the number of certified vendors has dropped significantly. Companies without our level of technical expertise have found it very difficult to achieve certification. The Drummond Group's Electronic Health Records Office of the National Coordinator Authorized Certification Body (ONC-ACB) program evaluated ClinicTracker and certified it as meeting the criteria.

With ClinicTracker Connect MU Edition, you can apply for Meaningful Use funds and receive up to \$63,750 in reimbursement per Eligible Provider. That's too much income to ignore. And we can even point you to resources that will help navigate the process of attesting for those funds.

In addition to Meaningful Use Stage 2, ClinicTracker Connect is fully HIPAA-compliant and handles DSM-5 and ICD10 coding standards - well ahead of the 2015 deadlines.

Now that it meets all Federal standards and guidelines, ClinicTracker becomes even more powerful in its ability to maximize your clinic's income and service quality. Some of the many new features include:

- Support for HIPAA requirements regarding Direct Secure Messaging
- A Patient Portal that allows a patient to view medical data, access upcoming scheduled appointments, see account balances, pay online, and more
- The capacity for patients to securely transmit their medical records in C-CDA format to outside providers
- Secure Messaging between provider and patient
- A Meaningful Use Dashboard that tracks compliance with attestation requirements
- Secure messaging of Transition of Care records for incoming and outgoing referrals
- NIST Time Synchronization to ensure your audit logs are always properly recorded and secure
- Compliance with regulations requiring designated diagnostic, medication, and billing codes
- Partnership with consultants to help navigate the attestation process

The Meaningful Use Dashboard tracks an agency's status in regard to MU requirements.

Frequently Asked Questions

Question: What is the difference between a Complete EHR and a Modular EHR?

Answer: The governmental agency that oversees the Meaningful Use program (CMS) relaxed the requirement in Stage 2 that every EHR had to meet every possible criterion, even if it had no relevance to the software’s users. ClinicTracker certified on all criteria required for a Complete EHR except for one related to transmitting data to immunization registries. Since ClinicTracker is focused on behavioral healthcare, not general medicine, we opted to forgo certifying this criterion. As long as the providers in your agency do not administer immunizations, you can fully attest with ClinicTracker Connect.

Question: I heard a rumor that Stage 2 implementation will be delayed. Does that mean I don’t need to upgrade to certified software?

Answer: No, you will still have to upgrade. However, there is a proposal under consideration for CMS to grant some extra time to providers who are experiencing difficulties fully implementing the Stage 2 edition. The details of that plan have not been finalized and, regardless, the 2014 version will be required no later than 2015. In the past, agencies have handled similar delays by essentially ignoring them. They’ve opted to make sure they had the infrastructure in place well ahead of government deadlines.
