

Web-based Staff Portal

Access schedules, complete forms, and more - online!

View and edit critical information from any internet-connected device with ClinicTracker's powerful Staff Portal

ClinicTracker is now even more convenient thanks to online access and calendar synchronization.

Schedule recurring events, handle conflict checking, and color-code events with the online calendar.

With our web-based Staff Portal, your staff can access key information stored in ClinicTracker from anywhere, on any device. The most valuable feature is an online scheduler that presents both a list and graphical view of your appointments or those of colleagues who have granted you permission. You can also view the calendar by patient or room as well as schedule both one-time and recurring events – all in the same format you’ve become accustomed to in ClinicTracker.

The scheduler within the Staff Portal is especially handy because you can synchronize your ClinicTracker schedule with whatever calendars you use on other devices and services. Downloading an individual event or specific events displayed on-screen is easy. You can even set up a real-time calendar feed from within programs such as Microsoft Outlook or gmail.

In addition to scheduling, the Staff Portal lets staff create and complete custom forms online using the same method you've come to know on the Patient Portal. For example, a staff member could enter information on a form designed to gather demographic information directly into a web-connected device. All information then flows directly into the ClinicTracker EHR. Those data are accessible remotely or from your desktop application.

See your current ClinicTracker schedule on your Outlook and Google calendars

Our development team will continue to add features to the Staff Portal over time. Next up is a replication of ClinicTracker's unified messaging system. You'll be able to send and receive secure messages within our software no matter where you are working, in addition to receiving messages from your colleagues, compliance alert, signature requests, and ePrescribing notifications. It's just another example of how ClinicTracker is the better way.

The Staff Portal is effective, yet simple to use. Like all the features in ClinicTracker, it was developed with extensive input from our users.
