Provide client access to information that matters

The Patient Portal lets clients view information about their:

- Demographics
- Clinical information
- Account balances
- Scheduled events
- Education resources
- Medical file

Because clients can access certain details of their file online, they can notify you of any changes to their personal or billing information. As a result, your records will always be up to date. Clients can view their schedule and confirm or cancel upcoming appointments. They can also see the balances on their account, including what they might owe. You can provide links to educational resources they can pursue to become more fully informed about their clinical treatment. Patients can also obtain a copy of their medical file which, they can save, print, or share with another medical professional.

EDUCATION RESOURCES

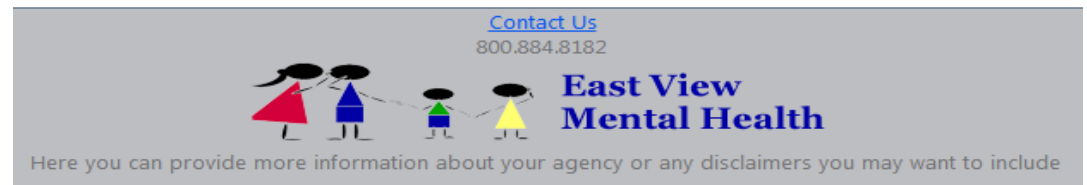

These are education resources offered specifically for you by your provider:

Date	Description	Notes	Link
04/04/2012	Article of Interest	This is what we were discussing today.	http://www.nlm.nih.gov/medlineplus/ency/article/000921.htm

06/12/2012	Coping Strategies	I hope you find this helpful. We will discuss in more detail during our next session.	http://www.nlm.nih.gov/medlineplus/ency/article/000921.htm

A service that boosts your agency's image

You can design the look of the Patient Portal to brand your clinic. Your logo will appear in the site footer alongside your contact information. You can also match your agency's color scheme and font style.

Pay bills online

Patients can now pay their bills online through the Patient Portal and even print out a receipt for payment verification. Your office staff can also receive confirmation emails for online payments. These payments can be reported on just like any other payment collected in the system. Increase your payment collections by making it easy for your patients to view their account history and pay their bills online.

Give clients a sense of ownership in their treatment

The Patient Portal is designed to improve patient satisfaction by offering simple, appropriate control over their medical record. Future releases will incorporate additional functionality to help improve communication with your clients while they are outside of the clinic.

The Patient Portal is an optional service designed to enhance a patient's experience with your office. This utility also fulfills part of ARRA Meaningful Use requirements that could help you receive stimulus funding.
